

Mitteldeutscher Schweinezuchtverband e.V.

Mitteldeutsche
Zuchtschweine-Erzeugergemeinschaft w.V.

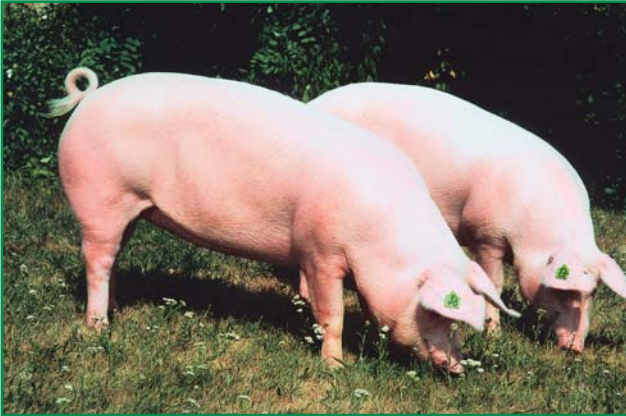

TOP-
genetics

from Middle Germany

With hybrid sows from our association we comply with the demand from Germany and abroad

- 45.000 Capacity of production of gilts per year, therefrom
34.000 Self-performance tested, stress stable hybrid sows –
Capacity on the basis of 6.000 monozygote
stress stable herdbook sows of the German Landrace

We deliver for new- and re-occupation of farms up to 2.000 gilts out of one breeding stock under consideration of different age classes (weaner, grower, pregnant gilts) according to your production cycles.

We comply with this to the manifold requests of our costumers.

Advantages in quality and health of our breeding products:

- Firmed genetic potential for production of at least 12 piglets born alive
- Production of slaughter pigs in line with market requirements of 800 g daily gain and 57% lean meat percentage
- High stability (homozygote stress stable) and longevity
- Favourable price/performance ratio
- Qualified for variable conditions of production

- Defined health status in all breeding and multiplier farms
- Delivery from PRRS-unsuspicious herds
- Breeding area is ministerially recognized as free of Aujeszky's disease

AI-stations owned by the association – warrant for the enforcement of an fruitful breeding strategie

Breeding and insemination in one hand

- Production from over 600.000 portions per year of the breeds German Landrace, Large-White, Pietrain, Leicoma and German Saddleback
- PRRS-unsuspicious boar stocks – important part for health precaution and safety for our customers
- EU-recognized AI-stations for inner-association trade

Dam lines self-performance testet on station

- Pure-bred test for breeding as well as fattening and slaughter performance
- Boars selected from central test stations (group housing with automatic feeders) for 10 years
- Individual recording of feed efficiency and daily gain in the test period
- Aimed selection for performance and stability
- Only about 2.5 - 3% of tested boars are used

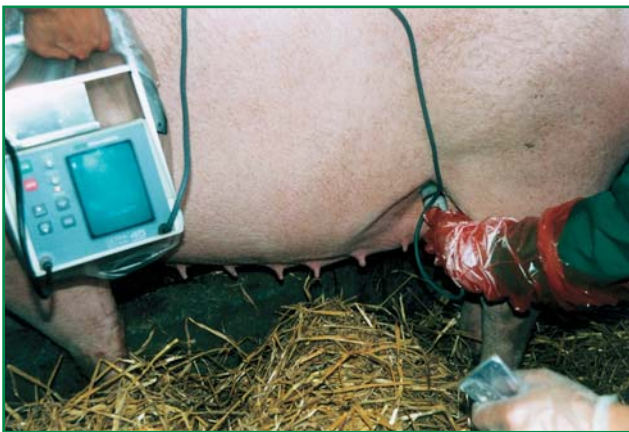

Progeny test in the field for terminal sires

Save way to TOP-genetic – proved over generations

- Test of sire lines in crossbreed under field conditions
- Annual test of about 5.000 animals with high fattening and slaughter performance
- Results from practice for practice - hence high acceptance of the results in piglet producer and finisher farms
- Continuous documentation of the efficiency of the hybrid breeding programme
- Results meaningful and save through high number of descendants per boar
- Combination of pure- and crossbred breeding values to an overall breeding value

Our service for members and customers

- **Management consulting for support and instruction of farms**
 - Up to date stock management
 - Evaluation of performances by association owned software
 - Analyses for fertility in sow herds
- **Advice and consulting regarding to questions of**
 - Organisation of breeding, reproduction, selection and performance test
 - Fertilisation, insemination and biotechnology
 - Husbandry and feeding
- **Early pregnancy tests with scanners**
- **Organisation and realisation in breeding pig trade with follow-up service**
- **Training and enhanced training of insemination specialists**
- **Passing on of latest results in research in cooperation with scientific institutions**
- **Tissue bank for breeding animals, organisation of gene diagnostic analyses**
